

**ABSTRACT OF THE DISCLOSURE**

[0035] A self-contained device for substance application and methods relating to the same are disclosed. An application device incorporating teachings of the present disclosure could have a first cavity and a second cavity at least partially defined by a support member. The support member may have attached applicators at its distal ends. A first substance may be located in the first cavity and a second substance may be located in the second cavity. The substances may be the same or different and may include 2-octyl cyanoacrylate and an antiseptic wash.
